

Suitable for everyone's needs but still unique.

Day-to-day business is becoming increasingly more dynamic and more mobile. The use of smartphones, tablets and cloud services is common in many areas and is also standard for our innovative 2508ci and 3508ci A3 colour multifunctional systems. They print at speeds of 25 and 35 A4 pages per minute, respectively – in both colour and black and white. Whether you are looking to print documents or photos from your mobile device or scan and save from the multifunctional system directly to your mobile device, there are virtually no limitations. With just one click and without a computer, you can scan to the cloud and print the saved documents from the HyPAS™-compatible multifunctional system without any problems.

HIGHLIGHTS:

 **Versatile:** Process different formats (A6R-5RA3) and paper weights (52–300 g/m²) and adapt your multifunctional system according to your processes and needs. Everything from a space-saving internal 500-page finisher to a dual scanner with an ultrasonic sensor for high-speed digitalisation is available for you. This system also makes it easier for you to digitalise and store documents. 16 small documents, such as receipts or business cards can be placed on the platen glass and then scanned, straightened and saved separately as JPG images or a PDF one after the other in one go.

 **New possibilities:** The UTAX Capture Manager* helps structure the many different document sources. The software solution handles the collection, processing, distribution and storage of documents, such as invoices, delivery notes, tables and price lists. Invoices and delivery notes are automatically recognised and indexed. In addition, all information can be filtered with the help of text, character and barcode recognition and documents can be searched through accordingly.

 **Completely accessible:** Accessibility options are very important to us and we are constantly working on optimising them, such as the tilting touch panel with intuitive menu navigation, for example. Different signal tones give you information on how the system is running and its current status. Large LED displays show documents or faxes in the job separator*. The free-to-use My Panel application allows you to operate the multifunctional system using a mobile device or map alternative basic functions using voice activation.

 **Play it safe:** A standard feature of the system is overwriting and deleting print, scan and copy data multiple times. The USB card reader* provides additional security in terms of your personal print data by verifying your identity to the multifunctional system using a contactless card or transponder. Logging-in with a smartphone using Bluetooth is also an option. These card readers automatically allocate your e-mail address and management code to you. As a result, you can immediately access and print your documents saved in the queue.
